

Veterinary Orthopedic Manipulation is a healing technology that locates areas of the animal's nervous system that have fallen out of communication, and re-establishes neuronal communication and thus induces healing.

VOM is singularly the most simple, effective and safe healing modality in veterinary care to date. For the VOM practitioner it is an exquisitely objective, fast and easy to apply technology that takes a minimum amount of time to master and whose scope of application appears has yet to be fully appreciated.
